

INFORMATION.

Name : Mohamad Farish Syah Danial Bin Tukiman.

Tel Number : 011-56640727

Address : Jalan Tasik Utama 7, Sungai Besi , 57000 Kuala Lumpur, Wilayah Persekutuan Kuala Lumpur, Malaysia.

Email : farishtukiman@gmail.com

LinkedIn : [linkedin.com/in/farish-danial-tukiman-2b792b276](https://www.linkedin.com/in/farish-danial-tukiman-2b792b276)

PROFESSIONAL SUMMARY.

I am a skilled PHP programmer with almost 3 years of experience, possessing a strong command of the Laravel framework. In addition, I have expertise in JavaScript, HTML, CSS, Python (Programming Language), C++, MIT App Inventor, Java, Flutter, and PhpMyAdmin, enabling me to deliver comprehensive solutions for web development. I am skilled in providing technical support using SQL, as well as leveraging the capabilities of Laravel. Known for my self-motivated attitude, I excel at building productive relationships with team members. Whether working independently on projects or collaborating with a team, I consistently demonstrate self-management and commitment to achieving optimal results.

EDUCATION BACKGROUND.

Kolej Yayasan Pelajaran Johor (UTM)

- Diploma in Computer Science and Technology.
- CGPA: 2.59
- Laravel Essential Training.
- Laravel Training (Beginner-Intermediate).

WORKING EXPERIENCE.

SAB System Sdn. Bhd.

Internship | July 2021 – Jan 2022

- Assisted in web application development for the Jail System using Laravel framework.
- Supported database integration and basic testing to ensure functionality and data consistency.
- Gained foundational experience in full-stack web development and system workflows.

SAB System Sdn. Bhd.

Web Developer | Jan 2022 – July 2022

- Continued development of the Jail System with enhancements to front-end and back-end modules.
- Implemented user acceptance testing (UAT) workflows to align with client requirements.
- Collaborated with senior developers to improve system stability and maintainability.

Zeta Integrated Solution Sdn. Bhd.

Web Programmer | July 2022 – August 2023

- Developed and maintained web-based payment systems for enterprise clients.
- Designed and enhanced DBKL Revenue Management System (DREAMS) to improve billing accuracy and efficiency.
- Implemented automated validation and reporting features to reduce manual processing.

Letilica Sdn Bhd.

Software Engineering | October 2023 – Current

- Designed and developed robust software systems for military applications.
- Conducted research and development (R&D) on emerging technologies to support defense solutions.
- Integrated hardware and software components (e.g., Raspberry Pi, microcontrollers) for field-testing and deployment.

PROJECT AND INVLOVEMENT.

Jail System. | 2021 - 2022

- Gained proficiency in the Laravel Framework, leveraging MVC architecture and ORM (Eloquent) to develop robust, modular, and scalable web applications.
- Designed and documented detailed User Acceptance Testing (UAT) workflows and test cases for all core processes within the Penjara Application System.
- Executed comprehensive system evaluations and validation testing to ensure functional compliance and alignment with defined client requirements.
- Monitored system behaviour, performed root cause analysis, and reported discrepancies between system output and client specifications to the Chief Technical Officer (CTO) for remediation.

DBKL Revenue Management System (DREAMS). | 2022 - 2023

- Implemented validation logic to prevent bill generation for inactive or outdated GL codes, ensuring billing data integrity.
- Automated GL code verification workflows to enhance billing accuracy and operational efficiency.
- Developed safeguards to block the release of erroneous same-day transactions, enabling proactive error detection and resolution.
- Introduced monitoring functionality to track and review failed debit raises, improving system transparency and user oversight.

DBKL Customer Self Service Postal (CSSP). | 2022 - 2023

- Developed front-end interface for insurance claim submission, enhancing usability and customer experience.
- Implemented invoice display on login and advanced search functionality by multiple identifiers (supplier, invoice, MyKad, passport, ROC, ROS, PTJ).
- Designed features for users to update banking details (account number and branch), improving accuracy and convenience.

Developing a Manual Checking Process for Local Verification. | 2022 - 2023

- Automated extraction of Excel files from the database, eliminating manual intervention and enabling seamless verification between DREAMS and EBS.
- Built automated monitoring for OSP (One Stop Payment) to detect and resolve stuck transactions, improving reliability and efficiency.
- Developed a reporting system to automatically retrieve and analyse database records via the website, streamlining reporting workflows.
- Automated verification tasks previously handled via manual SQL queries, improving accuracy and reducing workload.
- Implemented a listener to detect and capture incoming data in real time, eliminating manual monitoring.
- Automated queue checking through the website, reducing manual review time and resource usage.

Automated Targeting System Range. | 2023 - 2025

- Fully involved in the development and implementation of control systems for Target Ranges using a combination of hardware and software.
- Developed a graphical-user interface (GUI) using HTML, CSS and JavaScript for visualization and hardware control).
- UDP and TCP flow using python to link databases and hardware server.
- Database synchronization between controller and server.

Computer Base Training (CBT). | 2023 - 2025

- Develop a web-based digital training system to test the understanding of military trainees.
- The system includes modules related to the use of weapons, explosive devices (bombs), and aspects of military security.
- Uses hosting as a platform for storing and accessing the system online.
- Developed entirely using HTML, CSS, and JavaScript for interactive and user-friendly display.
- The CBT system helps increase the effectiveness of theoretical training before trainees undergo practical training.

Remotely Operated Vehicle (ROV Guardian). | 2023 - 2025

- Integrated heterogeneous hardware platforms, including Raspberry Pi 5 and microcontroller-based systems, for coordinated operation.
- Designed and deployed a graphical user interface (GUI) prototype using MIT App Inventor (Phase 1) for hardware interaction and control.
- Migrated the prototype into a native Android application (raw APK) to enhance system robustness, efficiency, and performance (Phase 2).
- Developed Python-based modules to manage real-time video streaming from onboard cameras to the control interface.
- Implemented OpenCV libraries for video stream processing and computer vision integration.
- Performed range and communication testing to validate long-distance connectivity between the command centre and robotic units.

Surveillance Radar of TRML-3D Networking. | 2023 - 2025

- Implemented and verified time synchronization across subsystems via centralized timeserver integration.
- Performed maintenance and synchronization of BIU (Basic Interface Unit) and TID (Tactical Information Display) modules to ensure operational alignment with system-wide time protocols.
- Enhanced TID subsystem by developing additional directory structures enabling automated retrieval of data and operational status from the timeserver, BIU, and other TRML-3D components.

SKILLS & CERTIFICATE.

Language :

- Malay (Fluent).
- English (Less Fluent).

Pro.Skills :

- Full-Stack Development (Frontend: HTML, CSS, Flutter, React | Backend: PHP, Laravel, Python, C++, Java).
- Database Management (MySQL, PostgreSQL, Oracle Database, PhpMyAdmin, PgAdmin).
- Cross-Platform Development (Web, Mobile App – Flutter, MIT App Inventor, Android Studio).
- Embedded & IoT Integration (ESP32, Raspberry Pi, UDP/TCP Server, Networking).
- System Administration (Ubuntu, Laragon, Server Configuration, Git/Github version control).
- Networking & Protocols (UDP, TCP/IP, Wireshark analysis, NTP/Time synchronization).
- Strong Problem-Solving & Debugging Skills (PHP errors, system troubleshooting, network packet analysis).
- Adaptability to New Technologies & Fast Learner.
- Collaboration & Project Tools (Visual Studio Code, Git Fork, Word documentation, agile-friendly).

Software :

- Visual Studio Code.
- Github.
- Git Fork.
- Laragon.
- Ubuntu.
- Word
- MIT App Inventor
- Windows
- Linux

Programming :

- HTML
- CSS
- FLUTTER
- PhpMyAdmin
- Python
- C++
- C
- PgAdmin
- Laravel
- PHP
- Oracle Database
- Java
- Oracle SQL
- C#
