LINKEDIN PROFILE

PROFESSIONAL SUMMARY

To use my best knowledge and skills for a job in our country in addition to gaining more experience and to improve myself in career advancement and finding a new and competitive work environment. Tenacious and detailed-oriented Computer Science Graduate with strong interest in robotics, microcontrollers, deep learning, digital forensics, ethical hacking and cyber sector especially automation of a task. Skilled in Ethical Hacker (ISO/IEC 17024), a Team Player and Natural-Born Thinker.

EDUCATIONAL BACKGROUND

UNIVERSITI PERTAHANAN NASIONAL MALAYSIA (UPNM), KUALA LUMPUR | SEPT 2021-SEPT 2023

Bachelors of Computer Science (Hons)

CGPA : 3.14

CERTIFIED ETHICAL HACKER

Cert No : ECC5312098647

Certification From EC-Council

WORKING EXPERIENCES

Information Technology Technician | 2015 – Current

Self-Employed

- Hardware troubleshooting such as determining the cause of a problem on a computer hardware's.
- Parts replacement for a computer that is needed.

Bounty Hunter | 2019 – Current

Self-Employed

- Proficient in tracking, investigating and surveillance techniques.
- Skilled in diverse areas such as combat and legal knowledge to handle varying situations.
- Submitting reports for any vulnerabilities that has been identified.

Internship | March 2023 – Sept 2023

CyberSecurity Malaysia

- Make an automated script to check integrity of a video.
- Involve in a project named CamScore, CamKenderaan & CamMuka.
- Specialised in vehicle forensics work such as CanBus.

Computer & System Engineer | December 2023 – Current

Letilica Sdn Bhd

- Design a robust system for military development.
- Designing system framework including networking.
- Research & development on technologies.

PROJECT AND INVLOVEMENT

BACHELOR DEGREE's PROJECT | 2022/2023

- **Thesis Title** : Pengesan Pemalsuan Imej Menggunakan Algoritma Convolutional Neural Network dengan Model VGG19
- Conduct a 6 months of study to evaluate the best technique to determine image forgery.
- Write and make a program that able to train convolutional neural network and test an image to determine its authenticity.

Dashcam Safety ScoreCard | 2023

- **Project Title** : CamScore
- The project involves two company which is MIROS and CyberSecurity Malaysia to determine dashcam robustness and capabilities.
- 40 Dashcams need to be test and rate based on their performance.
- The data from the dashcam verified using automated software to determine the integrity of what the specification claim.

Vehicle Plate Recognition | 2023

- **Project Title** : CamKenderaan
- The project use data collected from CamScore dashcam's to make an automated plate recognition.
- It determines which dashcam footage capable of doing the recognition.

Automated Targeting System Range | 2023/2025

- **System Architecture** : Developed a scalable architecture enabling target movement control and hit detection over a 200-meter distance. Ensured stable communication and response times across all 12 lanes.
- **Microcontroller Integration** : Utilized **ESP8266** and **ESP32** microcontrollers to control moving targets and detect bullet impact. Each lane uses a dedicated ESP8266 node for target positioning and reporting.
- **Networking Design** : Designed a hybrid communication model combining LoRa (sensor data) and Wi-Fi (command/control), ensuring reliable connectivity and minimal latency in a high-interference outdoor environment.

Remotely Operated Vehicle (ROV Guardian) | 2024/2025

- LoRa Communication Architecture** : Implemented LoRa (SX1278) for long-range, low-power wireless communication between the ROV unit and a ground station controller. Developed a custom LoRa command and telemetry protocol for reliable control and feedback across distances exceeding 500 meters (line-of-sight).
- Embedded System Development** : Utilized ESP32 microcontroller as the main processor for control, data processing, and communication. Developed modular code in Arduino (C++) to manage sensors, motors, and data packets.
- Motor & Movement Control** : Controlled DC thrusters or land-based drive motors using PWM motor drivers (L298N/BTS7960). Included logic for directional navigation, speed control, and soft-stop safety mechanisms.

SKILLS & CERTIFICATE

Programming : Python(Advanced), Java(Advanced), Javascript(Advanced), PHP(Advanced), SQL(Intermediate) HTML(Advanced), CSS(Advanced), C++, C

Software : Windows(Advanced), Ubuntu(Intermediate), Kali Linux(Advanced), Maintenance & Networking

Pro. Skills : Installation of Hardware & Software, Information Technology, Object-Oriented Programming, Ethical Hacking, Machine Learning & Deep Learning, Web Security, Penetration Tester, 3D Designing, LoRa Communication

Language : Malay (Fluent), English (Fluent), French(Basic), Arabic(Basic)

Certificate : Graduate of Computer Science, Certified Ethical Hacker (Cert. No. : ECC5312098647), Graduate Technologist (GT)
