PROFESSIONAL SUMMARY.

I am a skilled PHP programmer with almost 3 years of experience, possessing a strong command of the Laravel framework. In addition, I have expertise in JavaScript, HTML, CSS, Python (Programming Language), C++, MIT App Inventor, Java, Flutter, and PhpMyAdmin, enabling me to deliver comprehensive solutions for web development. I am skilled in providing technical support using SQL, as well as leveraging the capabilities of Laravel. Known for my self-motivated attitude, I excel at building productive relationships with team members. Whether working independently on projects or collaborating with a team, I consistently demonstrate self-management and commitment to achieving optimal results.

EDUCATION BACKGROUND.

Kolej Yayasan Pelajaran Johor (UTM)

- Diploma in Computer Science and Technology.
- CGPA: 2.59

WORKING EXPERIENCE.

SAB System Sdn. Bhd.

Jail System

- Acquired proficiency in utilizing the Laravel Framework to develop robust and scalable web applications.
- Developed comprehensive User Acceptance Testing (UAT) worksheets for each process within the Penjara Application Systems.
- Conducted thorough evaluations of the Penjara Application Systems to ensure alignment with client requirements.
- Promptly notified and reported any issues with the Jail Application Systems to the Chief Technical Officer, in case of discrepancies between the system and client requirement

Zeta Integrated Solution Sdn. Bhd.

DBKL Revenue Management System (DREAMS).

- Implemented a custom function aimed at preventing the generation of bills for inactive GL codes in the system, ensuring accurate billing processes.
- Devised a successful solution to validate the active status and currency of all GL codes used in bill generation, mitigating potential billing errors.
- Played a key role in enhancing billing accuracy and efficiency by automating the process of verifying GL code status before bill generation.
- Developed a robust and intuitive solution that enhances billing data accuracy, minimizing the likelihood of errors in billing procedures.
- Implemented an effective solution that proactively prevents users from releasing inaccurate transaction details on the same day, ensuring thorough error detection and resolution before finalization.
- Developed a dependable and intuitive solution that enhances data accuracy and reduces the possibility of errors in transaction processing.
- Implemented a feature within the Dreams application that allows users to conveniently check the total number of failed debit raises. This functionality provides an easy way for users to review and monitor the count of unsuccessful debit raises.

DBKL Customer Self Service Postal (CSSP).

- Developed the front-end interface for the insurance claim form within the application, ensuring an intuitive and user-friendly experience for customers to easily submit their insurance claims.
- Designed and implemented a user-friendly feature that enables customers to conveniently view their invoices immediately upon logging in.
- Implemented a user-friendly feature that enables seamless invoice search by supplier number, invoice number, MyKad, passport, ROC, ROS, and PTJ number, without the need for login credentials, streamlining the process, improving productivity, and enhancing user satisfaction.

- Designed and implemented a user-friendly feature within the system, allowing users to effortlessly modify their bank account number and bank branch information, enhancing user experience and ensuring accurate banking details.

Developing a Manual Checking Process for Local Verification.

- I have successfully automated the extraction of Excel files from the database, which eliminates the need for manual intervention. Previously, we used to perform this task manually, but now the process is seamlessly handled through our website, allowing us to effortlessly identify any pending or unprocessed items from Dreams to the EBS system.
- I have successfully generated a checking system for OSP (One Stop Payment), our online payment platform, to automate the identification of any stuck or unresolved transactions. Previously, we used to perform this task manually, which was time-consuming and prone to errors. However, with the new automated checking system in place, we can efficiently monitor and track transactions, ensuring timely resolution of any issues. This automation has greatly streamlined our processes and improved our ability to address payment-related concerns, resulting in a more seamless and satisfying customer experience.
- I have successfully generated a reporting system that automates the retrieval of data from the database, eliminating the need for manual extraction. Previously, we had to invest significant time and effort in manually extracting data and conducting the reviewing and analysis process. However, with the implementation of this automated reporting system, we can effortlessly access and evaluate the information stored in the database directly through our website. This automation has significantly improved our reporting workflow, allowing us to save valuable time and effort that was previously spent on manual tasks. By removing the manual intervention, we ensure that the reporting process is more efficient and accurate, providing us with up-to-date insights through our website.
- I have successfully automated the checking process using our website, eliminating the need for manual execution. Previously, we used to perform the checking manually by relying on SQL queries, which was a time-consuming and laborious task. However, with the implementation of the automated checking system on our website, we have significantly improved efficiency. This automation allows us to seamlessly and effortlessly perform checks without the need for manual intervention. By removing the manual aspect, we have simplified the checking workflow and saved valuable time and resources.
- I have successfully automated the checking listener to detect incoming data within our system, eliminating the need for manual monitoring. Previously, we had to dedicate time and effort to manually check for incoming data, which was a cumbersome and error-prone process. However, with the implementation of the automated checking listener, we can now effortlessly monitor and capture any new data as it enters the system. This automation has significantly improved our workflow, as we no longer need to rely on manual intervention to ensure that no important data goes unnoticed.

- I have successfully automated the checking of the queue through the database using our website, which eliminates the need for manual review. Previously, we used to perform this task manually, spending significant time and effort. However, with the new automation in place, we can now effortlessly review the queue directly through the website, saving valuable time and resources .

MRA Global Sdn Bhd.

Project Engineer (Sistem Lapang Sasar)

- Fully involved in the development and implementation of control systems for 600m and 200m Target Ranges using a combination of hardware and software.
- Using Raspberry Pi 5 and router as the main system controller and communication medium.
- Developed a user interface (UI) using HTML, CSS and JavaScript to control the target position (up & down).
- Wrote a Python script to send digital signals to the ESP32 board, which controls the target motor wirelessly.
- The project has proven to work stably in real training situations and has improved the efficiency of target field management.

Computer Base Training (CBT).

- Develop a web-based digital training system to test the understanding of military trainees.
- The system includes modules related to the use of weapons, explosive devices (bombs), and aspects of military security.
- Uses hosting as a platform for storing and accessing the system online.
- Developed entirely using HTML, CSS, and JavaScript for interactive and user-friendly display.
- The CBT system helps increase the effectiveness of theoretical training before trainees undergo practical training.

Robot Pemusnah Bom (Bomb Disposal Robot).

- Developed a **remote-controlled robot system** to assist in bomb disposal tasks under the supervision of the **Royal Malaysia Police (PDRM)**.
- **Hardware Used:** Raspberry Pi 5, Router, ESP32, Arduino Mega, Camera.
- **Software/Programming:**
 - **MIT App Inventor:** Created the mobile UI for remote control.

- **Python:** Used to capture and stream live visual feeds from the robot's onboard camera.
 - **C++:** Programmed the ESP32 and Arduino Mega to handle motor and sensor control.
- Built a full communication link between the mobile interface and ESP32 to command movement and action.
- The robot supports safe remote handling of potential explosive devices in the field.

SKILLS & CERTIFICATE.

Laravel Essential Training.

- Tertiary Infotech Sdn Bhd

Laravel Training (Beginner -Intermediate).

- Favourite Trainer Sdn Bhd

Software

- Visual Studio Code.
- Github.
- Git Fork.
- Laragon.
- Ubuntu.
- Word

Programming

- HTML
- Cascading Style Sheets (CSS)
- Flutter.
- JavaScript.
- PhpMyAdmin.
- Python (Programming Language).
- pgAdmin.
- Laravel.
- PHP.
- Oracle Database.
- Java.
- Oracle SQL.

- C++.
- MIT App Inventor.
